INTRODUCTION.

THE "SCHOLAR'S COMPANION" has been too long before the public, and too widely endorsed, to require a labored defence as a text-book for schools. The sale of half a million of copies in more than a hundred editions, with an increasing demand, is sufficient indication of the estimate in which it is held. In revising it for a new edition, it has not been thought best to attempt any alteration in the plan or arrangement of the text. This, besides the doubtful utility, would render the new edition unfit to be used with those already in extensive use in the schools. Some more marked distinctions in the old arrangement, with a copious index for easy reference, with an improved typography and style of mechanical execution, is all the Publishers deem necessary to meet the wishes of its numerous patrons. These improvements have been effected at considerable expense, and it is hoped they will be acceptable.

Part I. embraces a large and judicious selection of cognate words, requiring the particular attention of the learner to their orthography and orthoepy; also a list of equivocal words, or words spelled and pronounced alike, but used in different significations, and a corrected list of others that are improperly spelled and used. These selections are not unnecessarily multiplied, and yet they are fully sufficient for all practical purposes.

Part II. treats of the composition and the derivation of words. The learner who makes himself familiar with the prefixes and suffixes, as here presented in a few pages, will hardly need more for all practical purposes to enable him to recognise readily their proper force and effect.

The etymology of words derived from the Latin and the Greek is of leading importance, because such words are the most numerous.

Language, in its principles and its structure, is necessarily, and everywhere, the same. The Latin and Greek scholar has the advantage of the mere English scholar in this only, a facility in tracing the ety-

mology of a large class of our words which have been derived from those languages. Yet by a careful study of the etymology of the words whose derivation is traced in the following pages, the English scholar will find his only compensation for the lack of that classical learning which can be obtained only by a long course of study. To the classical scholar, these exercises will be doubly useful and interesting.

Part III. embraces the important study of synonyms. The importance of this branch of the study of words can be duly appreciated only by those who have pursued it critically. It is indispensable to a correct use of language, and has contributed essentially to place the few who have attained the highest eminence in scholarship above the others of high position. Augustine said of Cicero, "*Ille verborum vigilantissimus appensor ac mensor*"—*a skilful mint-master, a subtle watcher and weigher of words*. Of all masters of the English language, none perhaps deserves so nearly a comparison with Cicero as Daniel Webster. All who have ever aided him in placing his thoughts upon paper—and he was often obliged to employ amanuenses—can testify how critically he watched and weighed his words, how accurately he discriminated, how he would discourse on the nice shades of distinction when he required the change of a word, how he was capable of showing clearly, etymologically, historically, eloquently, and convincingly, a difference where ordinary scholars had discerned only a simple synonym. This made his definitions and opinions of authority, and will for ever place his written discussions in every department among the most cherished classics of English literature.

The subject is fairly opened in these pages, and enough is here collated for a class-book; enough, too, to awaken an interest which may lead the inquiring mind to pursue the subject in more elaborate treatises. These may be found at hand in "*Roget's Thesaurus of English words*," revised and edited by Dr. Sears, a work of sterling merit and priceless value to the scholar who would attain to accuracy in writing or speaking his mother-tongue. "*Trench on the Study of Words*" may also be recommended as a book which unites the interest of a novel with a most critical and discriminating philological discussion.

"How often," says Trench, "do the great masters of style in every tongue,—perhaps none so often as Cicero, the greatest of all,—pause to discriminate between the words they are using; how much care and labor, how much subtlety of thought they have counted well bestowed on the operation; how much importance do they avowedly attach to it! Not to say that his works, even where he does not intend it, will be a continual lesson in this respect, a great writer, merely in the accuracy with which he employs words, will always be exercising us in synonymous discrimination."

“Nor is this habit of discrimination valuable only as a part of our intellectual training; but what a positive increase is it of mental wealth when we have learned to discern between things which really differ, but have been hitherto confused in our minds; and have made these distinctions permanently our own in the only way by which they can be secure, that is. by assigning to each its appropriate word and peculiar sign.

“What a help, moreover, will it prove to the writing of a good English style, if instead of having many words before us, and choosing almost at random and hap-hazard from among them, we at once know which, and which only, we ought in the case before us to employ, which will be the exact vesture of our thoughts. It is the first characteristic of a well-dressed man that his clothes fit him; that they are not too small and shrunken here, too large and loose there. Now it is precisely such a prime characteristic of a good style that the words fit close to the thoughts: they will not be too big here, hanging like a giant’s robe on the limbs of a dwarf; nor too small there, as a boy’s garment into which the man has with difficulty and ridiculously thrust himself. We do not feel in one place that the writer means more than he has succeeded in saying; in another, that he has said more than he means; in a third, something beside what his intention was—and all this from a want of dexterity in employing the instrument of language, of precision in knowing what words would be the exactest correspondents and fittest exponents of his thought.”

Words are to be considered principally in two relations, viz.: in their definite meaning, and in their grammatical construction. In their latter aspect, we learn the structure of language, the different classes of words with their philosophical uses and relative importance—in the former, the force and distinct signification of each separate word. This requires an accurate knowledge of their origin and authorized use.

In tracing the etymology of words, we go first to the original words in the language where they have been first employed, or to their first formation, if original, in our own language. Thence we trace their related meanings, the modified uses to which they have been applied, and the new significations which, in process of time, have been assigned to them. Sometimes a word is entirely changed from its original meaning, and is used not only in varied but in opposite senses. Words are constantly manufactured too for the times, for the new things that are made the subject of thought, or for the new modes of thought that are entertained. They are also formed by the combination of different words; by affixes and suffixes. They are thus, at different periods, changed or modified in meaning, and new words are invented.

Language, the first necessity of the mind, is not only the instrument

but the nutriment of thought, "essential to the activity of our speculative powers, modifying, by its changes, the growth and complexion of the faculties it feeds."

The importance of language, then, is readily perceived in its necessity, its controlling influence, and its uses. It is necessary to the development of mind and to civilization. The language of a nation or of an individual tests the character as accurately as the thermometer tests the elevation of the temperature, or as the consols of England indicate the value of money in the market.

Thought is the capital deposit of the mind; Language the medium of exchange and intercommunication. The consols of the race man consist of the united stock of all these separate deposits, where the value of each is set forth and certified in language, the instrument of thought. Books written become the indentures of a common partnership. Here, the treasures "unhedged, lie open in one common field, and bid all welcome to the vital feast."

The study of language as a mental discipline, is, perhaps, of greater influence than any other study: not generally so considered, only, perhaps, because like everything common, its true position and true influence are lost in the subtle involution of its power with any study that is new, startling, or difficult. We must analyze the mind's operations in the solution of problems in science, or labored results in philosophy, before we can detect the nice distinctions required, and sought out, and discovered in the words and forms of speech which we use to define our propositions and elucidate our arguments. Here is a field for philosophy, for logic, for mental enterprise, for keen analysis, and nice discrimination. Here, in the clear exhibition of results to others—requiring the logic, the philosophy, the illumination of language—a mental activity is exercised more important to a healthful discipline than in most, perhaps than in any, other profound investigations prosecuted in thought.

The study of words is the study of philosophy, of history, of morals. We may read a nation's history in a nation's words. Mind is there stereotyped in form and feature like the reality of life. There is often more of true history to be learned in a Dictionary, which cannot lie, than in written annals, which may be framed by prejudice, pride, affectation, misconception, or intended falsehood. Tradition is shadowy; memories may be partial; history, even, is often poetic, mixed with fiction. But a nation's language is itself, the record of the day and the hour, and the honest reality of its acting, thinking, speaking. Words are things. In everything, therefore, which they fairly indicate, they are reliable.

The study of words, then, becomes something more than a detail of vocables, a tissue of sounds: "'Tis food, 'tis strength, 'tis life."

The study of words has never yet had its proper place in the educational course. If pursued at all, it has been a study of definitions merely, disconnected with etymology. We here trace the stream to its sources, explore its fruitful branches and its delta, where, by a hundred mouths, it brings down accumulated treasures to a common reservoir of human thought, whence, as from the ocean, is exhaled a healthful influence that refreshes the whole face of the earth.

“Word warriors” have caused more bloodshed and misery than all the executioners of martyrs to truth and principle. Books have been written, treasures squandered, controversies exasperated, eternal hatred engendered, armies brought into deadly conflict, and nations revolutionized or destroyed, for *a word*: more than this,—for a word *misunderstood*, for an illusion.

“One word interposed
Makes enemies of nations that had else,
Like kindred drops, been mingled into one.”

Theological controversies, political asperities, judicial litigations, personal animosities, have their origin and vitality most often in the misunderstanding of words. This, unperceived by the contending parties, is often obvious to the disinterested observer—sometimes apparent to the combatants themselves after all the mischief has been done, past remedy.

That which is so often fatal to truth and to right in social life, is also injurious to the individual mind in all its own inquiries and activities. We think in words. Hence these words must truly represent their antitypes, else the mind deceives itself, and is at war with its own opinions. Thus the mind becomes its own tormentor, biting and devouring itself; or urged on to conflict without an object, it builds a man of straw, applies the faggot, and is consumed by the fire it has wantonly kindled; or like the viper bites itself to death, a suicide without a cause.

Thus it is not without a philosophical reason the Saviour said to the Pharisees: “By thy *words* thou shalt be justified, and by thy *words* thou shalt be condemned.” The connection between the words we utter and the moral emotions, is palpable to every man who has studied the mental processes of his own consciousness. Physiologically, the connection between the vocal organs and the brain is known to be delicately sensitive and powerfully reciprocal. The same may be true, metaphysically, between the verbal definitions in our mental activities and the permanent impressions of principles on the mental and moral emotions. In the spiritual state, these verbal mental processes place in permanent forms what words, uttered or written, stereotype in vocables.

They are then ours, adopted, attach to the mind as a part of itself, and become permanently operative. A man's thoughts, which are words uttered in himself, are the record by which he may read himself as truly as the opinion, written or spoken and defended, reveals him to others. Habits of thinking are as important, often more important, on permanent forms of character than habits of speaking. Hence the wisdom of that caution, "Be careful of thy words, whether in thought or utterance."

Definitely, the *study of words* is the object of this treatise, intended to initiate the young learner early into the habit of a critical definition of the language he uses. Beyond mere orthography and correct pronunciation, it is designed to introduce the young mind into the inner life of words, and thus into the inner life of the soul. It is a spelling-book, but that is not all. It teaches correct pronunciation, but that is not all. It is a defining Dictionary,—but still more, it discriminates the nicest shades of difference in words, in thought, and contributes eminently to form the mind to truth, and the character to uprightness, and the soul for its immortal destiny.

If we may have contributed to awaken the minds of Teachers and educationists to the true dignity, importance, and influence of the *study of words*, we have installed our subject in its proper place, and accomplished the object of this brief Introduction to the SCHOLAR'S COMPANION.

THE

SCHOLAR'S COMPANION.

PART I.

CLASSIFICATION OF WORDS ACCORDING TO ORTHOGRAPHY AND PRONUNCIATION.

To the Teacher.—In using Part I., various modes of study and recitation may be employed, and it will usually be found best to pursue no one mode exclusively. But it is earnestly recommended to the teacher to employ a variety of *written*, as well as oral exercises, in the classes which are studying this Part. Let the pupils be required (for instance), to form sentences which shall contain the words of the lesson; and let the plan of the composition be simple or more difficult, according to the age and attainments of the class. Written exercises of this kind may be varied to almost any extent, and will be found on many accounts advantageous in the prosecution of such studies.

CHAPTER III.

EQUIVOCAL WORDS: *or words whose different significations have either no connection with each other, or none which can be easily traced.*

NOTE.—As the words of our language have been derived from various other languages, it has often happened that two or more words entirely distinct in their origin and signification, have taken the same spelling and pronunciation in English. Thus, from the Saxon word *beorcan*, is derived the English word *bark*, signifying to make the noise of dogs; from the French word *barque*, is derived *bark*, a vessel; and from the Danish word *bark*, is derived *bark*, the covering of a tree. Words which thus have the same form while they are of different derivation and signification, are sometimes called *paronymous*. Many of the words in the following chapter are of this class. When *ed* is added to those words which double the consonant, the *e* may be omitted in writing, and an apostrophe supply its place; but when the consonant is not doubled, the *e* should be written; thus, *robb'd* for *robbed*; but not *rob'd* for *robed*.

PART II.

DERIVATION.

DIRECTIONS FOR USING PART II.—The pupil should study Chapter I., so as to be able to recite it readily, (i. e. to state the substance of each of the preliminary observations, and to give an account of each of the Prefixes and Suffixes, with the examples which illustrate their use,) before proceeding further.

The figures included in parentheses refer to the paragraphs of Chapters II. and III.; and in Chapter I., the references to Latin and Greek words are distinguished by the letters L. and G.

It is desirable that Part II. should be *studied, as a distinct exercise*, before it is used as a reference book. The pupils will thus become accustomed to tracing the etymology of words, and will be prepared to discover, without referring to the book, the derivation and signification of many words, on meeting with them for the first time. Not only should the practice of tracing English words to their Latin or Greek primitives be continued by all pupils who have studied this Part, but those who are studying Latin or Greek should be in the habit of ascertaining, and stating in their recitations, what English words are derived from the Latin or Greek words which occur in their lessons.

CHAPTER I.

GENERAL ACCOUNT OF THE DERIVATION AND COMPOSITION OF ENGLISH WORDS.

1. THE words of the English language may be separated into two principal classes, viz. : *words of Saxon origin*, and *words of Latin origin*. Words derived from the ancient Greek, belong, in this general division, to the latter of the two classes ; although they will be arranged by themselves, for the sake of convenience, in the following pages.

Note. For an account of such words as are neither of Saxon nor Latin origin, let the student consult Dr. Webster's large Dictionary.

2. A great part of the words which are classed as words of Latin origin, were introduced into the English, not directly from the Latin itself, but from the French, or from some other of those modern languages which sprung from the Latin, and strongly resemble it. For example, the word *finish* may have come into our language from the French word *finir* ; but both are to be traced back to the Latin word *finis*, (L. 176), signifying an *end* or *limit*.

3. By learning the derivation of a word, we often obtain a clearer notion of its signification than we could obtain in any other way. This is true of the following examples, viz.: *contact*, which is from the Latin particle *con*, together, and the verb *tango*, (participle *tactus*), (L. 526), to touch; *Federal*, from *fædus*, (L. 162,) a league, or treaty; *Gradual* from *gradus*, (L. 207), a step; *Induce* from *in*, into, and *duco*, (L. 133), to lead.

4. As Latin and Greek words often vary considerably in form, in their different cases, tenses, &c., and as the English word is not always formed from that case or tense which is considered the foundation of the others, it is often necessary to know more than one of the forms which the Latin or Greek word may assume. Thus, the word *fluent* is derived from the Latin verb *fluo*, (L. 185), to flow; while *influx* is from *fluxum*, the supine of the same verb, and the preposition *in*. So the Latin adjective *felix*, (L. 163), which has in its genitive case *felicis*, gives rise to the English word *felicity*.

5. In arranging English words in *families* under the Latin or Greek words from which they are derived, it is proper to place under the several Latin or Greek words, not only the English words derived *immediately* from them, but also those derived from *their derivatives*. For example, under the Latin word *nascor*, (L. 324), (part. *natus*), to be born, should be classed the English words *nascent*, *natal*, *natural*, *nativity*, and *nation*; although, with the exception of the first, they are derived more immediately from words in the Latin which are derivatives of *nascor*, viz.:—*natalis*, *naturalis*, *nativitas*, and *natio*.

6. Many English words are formed from other English words, by means of *prefixes* and *suffixes*. A letter, syllable, or word joined to the beginning of a word is called a *prefix*; a letter or syllable joined to the end is called a *suffix*. Thus, from *tell* is formed *foretell*, by joining a prefix; and from *do* is formed *doer*, by joining a *suffix*. A word may take two or more prefixes or suffixes at the same time. Thus, *reproduce* contains two prefixes, *re* and *pro*; *wonderfully* contains two suffixes, *ful* and *ly*; *roguishness* two suffixes, *ish* and *ness*.

7. Some of the prefixes and suffixes are of Saxon origin, and others are of Latin origin. Some of them are words which may be used separately, while the greater part are *inseparable*, i. e. are never used by themselves. Many of the prefixes which are inseparable in English, are separable in the languages from which they are derived.

8. In learning our own language, we become so familiar with the signification of most of the prefixes and suffixes, (although it is not always easy to *state* that signification), that as soon as we

have ascertained the meaning of any word which is new to us, we can tell what would be the meaning of the several words formed from it by such additions. Thus, after learning the meaning of the word *confirm*, we know what must be the meaning of the words *confirmed*, *confirmation*, *confirmatory*, *confirmer*, *confirmedly*, *unconfirmed*, &c., from the manner in which they are varied from the word *confirm*. In some cases, the prefixes or suffixes seem not to affect the signification of the word to which they are joined.

9. When a prefix ends with a consonant, that consonant is often changed or omitted, in order that the prefix may unite easily with the word to which it is to be joined. In the words *affix*, *cohere*, (L. 217), *implant*, and *suffix*, (for example), the prefixes *ad*, *con*, *in*, and *sub*, are changed, for the sake of producing a more agreeable sound.

PREFIXES.

The following is a list of the most important prefixes used in forming English words. The abbreviation (Lat.) shows that the prefix is from the Latin; (Gr.) that it is from the Greek. Prefixes which are *inseparable* in the languages from which they are derived, (as above explained, § 7,) are denoted by the abbreviation (insep.)

SUFFIXES.

IN the following list of suffixes, examples are given, under each suffix, of the several parts of speech which that suffix is used to form. Thus, under Ate, the example preceded by the abbreviation *a.* illustrates the manner in which *ate* is used to

form adjectives; the example marked *s.* illustrates its use in forming substantives.

The signification of the suffixes must be learned by observation. In many cases, it is impossible so to state it, that the pupil can use the statement as a general definition, in analyzing words. Should the teacher desire something like a general definition, the words italicized in the explanations of the examples given in this list, may be used for this purpose, as the sentences are constructed with a view to such a use of the italicized portion. In analyzing words, with reference to their derivation, the pupil should be accustomed to state what part of the word constitutes the suffix,—what part or parts of speech it is used to form—and how it affects the signification of the word in question. A careful study of the examples here adduced and explained, will give the pupil facility in expressing the signification of the suffixes in other cases.

CHAPTER II

WORDS DERIVED FROM THE LATIN.

PRONUNCIATION. Latin words are usually pronounced in this country, in accordance with the general principles of English pronunciation. The following directions, however, are necessary for those who have not studied Latin, and should be carefully observed.

1. Every Latin word has as many syllables as there are vowels or diphthongs in it. Thus, in the expression *bona fide*, in good faith, the word *fide* has two syllables, the *e* being sounded as *e*

in *me*. In like manner the words *voce, jure, parte, lege, &c.*, are pronounced each with two syllables.

2. Words of *two* syllables have the accent always on the first syllable; as *a'cer, a'go, ar'bor*. In this book the accented syllable is marked, in all Latin words of more than one syllable; and the manner in which the word is divided will generally show what sound is to be given to the vowel of the accented syllable.

3. When a word of more than one syllable ends with *a*, that letter is sounded as *a* in *ah*, except that the sound is not prolonged; as *cau'sa, cate'na*.

4. The diphthongs *æ* and *œ* are sounded as simple *e* would be in the same place; thus, *fe'dus* and *œm'ulus*, are pronounced as if written *fe'dus, em'ulus*.

5. *C* and *g* are hard before *a, o, and u*, and soft before *e, i, and y*; thus, in the words *ca'no, co'lo, and cu'ra*, the *c* has the sound of *k*; in *ce'do* and *ci'vis* it has the sound of *s*. So *g*, in the words *fuga'tus, li'go, and lon'gus*, has the sound of *g* in *give*; in the words *ge'ro* and *gig'no* it has the sound of *g* in *gentle*.

6. *Ch* always sounds like *k*.

For a full account of Latin pronunciation, see Andrews's and Stoddard's Latin Grammar.

 In the following chapter, a Latin word placed in a parenthesis immediately after another Latin word, as (*acris*) after *Acer*, shows the form which that word assumes in the *genitive case*, if it be a substantive or adjective; or in the *supine*, or some other inflection, if it be a verb.

In the several paragraphs, the words are not always arranged in exact alphabetical order, because it is desirable that words formed immediately and obviously from the Latin word should be placed before those whose derivation is more remote.

IV. FRENCH WORDS AND PHRASES.

As French words and phrases are very frequently introduced into English conversation and writing, it is desirable that every person should have some idea of the pronunciation and signification of those, at least, which are most common. The following account of some of the French sounds will perhaps be sufficient for the purposes of this chapter.

a, short, sounds like *a* in the English word *fat*.

â, long, " *a* " *arm*.

e, at the end of monosyllables, sounds like *u* in *tub*; and is mute at the end of other words.

é, sounds like *a* in *able*.

è, " *e* in *met*.

ê, " *e* in *there*.

i, short, " *i* in *idiot*.

î, long, " *ee* in *eel*.

o, short, " *o* in *ornithology*.

ô, long, " *o* in *old*.

u no similar sound in English.*

ou, sounds like *oo* in *cool*.

an, " *an* in *want*.

in, " *an* in *pang*.

on, " *on* in *long*.

eur, " *ur* in *fur*.

oi, " *wa* in *water*.

oir, " *war* in *warfare*.

oin, " *oo* in *cool*, and *an* in *pang*.

ail, " *a* in *fat*, and *lli* in *billiard*.

eil, " *e* in *there*, and *lli* in *billiard*.

euil, " *u* in *tub*, and *lli* in *billiard*.

gn, " *ni* in *union*.

j, " *s* in *pleasure*.

ch, " *sh* in *shark*.

* Although the sound of the French *u* cannot be represented by English letters, the following rule will enable the pupil to form some idea of it. Place your lips as if about to pronounce *ou* as in *soup*, and bring the extremity of your tongue against your lower teeth. With your organs in this position, you will be likely to produce the sound of the French *u*.

FRENCH WORDS.

N. B.—In the following list of words and phrases, the representation of the French sound, which is given in parenthesis, is figured in accordance with the above table of sounds. A letter having *no mark* over it is to be sounded as that which has no mark in the table; the pupil must not suppose that he is to give it the English sound. The accents are only *marks indicating sound*, according to the above table. When the letter *n* is italicised in the parenthesis, it is to have the English sound of *n*, and not the French nasal sound.

PART III.

ENGLISH SYNONYMS.

WORDS which are strictly *synonymous*, i. e., which are used to convey precisely the same idea, and might be substituted for each other in any possible connection, are almost, if not entirely unknown. But the term *synonymous* is applied, in common usage, to words which represent a given idea under different limitations or modifications, while the words belong to the same part of speech. As the degree of resemblance between the signification of such words may vary indefinitely, a larger or smaller number of words would, on different occasions, be classed together as synonyms, according to the different purposes for which the classification should be made.

In attempting to express ideas, either orally or in writing, it is often difficult to recall the word which most nearly meets the case. Young writers, especially, are much embarrassed in this way; and without some aid, they will not rapidly improve in pertinency and variety of expression. It is the object of the following collection of synonyms to furnish the aid which the difficulty above mentioned renders necessary.* When the student is in doubt respecting the distinction between the significations of words here classed together, he will of course resort, either to a large English dictionary, or to a proper dictionary of synonyms, like that of Crabbe. In consulting the following pages, he may not only have the appropriate word suggested, when the memory alone is at fault, but may become acquainted with new words, and be led to investigate their meaning.

In arranging the words in paragraphs in this Part, the aim has been to place those of a more general or comprehensive signification first, and those more limited afterwards; a transition to words of a distinct class is marked by a semicolon. Words are occasionally introduced which may seem too remote; but if it is borne in mind by the pupil that the words classed together are not to be considered as defining each other, no error will be occasioned by thus extending the classification.

This Part may be used, with great advantage, as the basis of exercises in which the pupil shall be required to discriminate carefully between the significations of words more or less nearly synonymous. These exercises may, of course, be much varied. They will be found admirably adapted to cultivate habits of accuracy in thought and expression.

* This collection did not form a part of Butter's *Expositor*, but is derived from a work by William Carpenter.
